Preface

Welcome to Mathematical Methods Units 1&2! I'm Vinh Nguyen, a past student who has taken both the Methods and Specialist Maths courses, here to guide you through this challenging – but reasonable – subject. I have always taken a liking to mathematics throughout high school, and in these notes, I will give you all the tips and tricks I've learned along the way.

Right off the bat, you may have chosen this course for a variety of reasons, such as for university prerequisites, but the best tip I can give right now if you are just starting this course is to **persevere through the beginning!** It can be a jolting step up from your previous maths classes. In my experience, I would say over half of the students in my Methods cohort dropped the course by the end of Unit 1. So, be prepared to put in the effort to study and set feasible expectations for yourself, and don't worry if you find things a bit challenging at first.

Remember that your final ATAR result depends solely on assessments in Units 3&4, so your performance in Units 1&2 won't *directly* count. However, don't be fooled – many students will 'take it easy' in Year 11 and think that they can 'start fresh' in Year 12 if things go awry. For Methods, Units 3&4 directly build on the content in Units 1&2, so it is absolutely necessary to pay attention now! Whilst undertaking Units 3&4 of Methods, I found that many students had to go back to relearn the basics of topics like trigonometric functions – while you will inevitably forget some things, do your best to avoid this scenario, and you'll make Year 12 much easier for yourself!

Finally, Maths Methods is a 'doing' subject; the best way for you to use this book is to go through the examples to understand how the concepts are applied, then try to practise some questions for yourself until the theory really sticks with you. If you study regularly and make sure to practise problems every time you cover a new topic, you'll be well on your way to success in Units 1&2!

— Vinh Nguyen

Contents

I	Unit 1: Algebra, statistics, and functions	1
1	Arithmetic sequences and series	2
1.1	Arithmetic sequences	2
1.2	Arithmetic series	4
2	Functions and graphs	6
2.1	Reviewing relations, domain, and range	6
2.2	Functions	7
2.2.1	Vertical line test	7
2.2.2	Function notation	7
2.2.3	Translations of functions	8
2.2.4	Dilations of functions	9
2.2.5	Reflections of functions	10
2.2.6	Piecewise functions	11
2.2.7	Applying functions	12
2.3	Review of quadratic relationships	13
2.3.1	Using factorisation	14
2.3.2	Using the quadratic formula	15
2.3.3	Completing the square	16
2.3.4	Using a calculator	18
2.3.5	The discriminant	18
2.3.6	Problem solving questions involving quadratics	19
2.4	Inverse proportions	21
2.5	Powers and polynomials	23
2.6	Graphs of relations	28
3	Counting and probability	29
3.1	Sample spaces and probability	30
3.2	Multi-stage experiments	31
3.3	The addition rule	32
3.4	Conditional probability	33
3.5	Independent events	34
3.6	Counting methods and binomial expansion	35
3.6.1	Arrangements	35
3.6.2	Combinations	36
4	Exponential functions 1	39
4.1	Indices and the index laws	39
4.2	Rational indices	40
4.3	Scientific notation	40
5	Geometric sequences and series	41
5.1	Geometric sequences	41
5.2	Geometric series	42
5.3	Applications of compound interest	42

II	Unit 2: Calculus and further functions	43
1	Exponential functions 2	44
1.1	Graphs and transformations of exponentials	44
1.2	Solving exponential functions	46
2	The logarithmic function 1	47
2.1	Introduction to logs	47
3	Trigonometric functions 1	50
3.1	Circular measure and radian measure	50
3.2	Introduction to trigonometric functions	51
3.3	Exact values	53
3.4	Graphs of trigonometric functions	54
3.5	Symmetry properties of trigonometric functions	57
3.6	Solving trigonometric functions	59
3.7	Graphs of trigonometric functions continued	61
3.8	Applications of trigonometric functions	62
4	Introduction to differential calculus	63
4.1	Rates of change and the concept of derivatives	63
4.2	Properties and computation of derivatives	65
4.3	Applications of derivatives	66
4.3.1	Equation of the tangent	66
4.3.2	Kinematics	67
4.3.3	Stationary points	67
5	Further differentiation and applications 1	71
5.1	The chain rule	71
5.2	The product rule	71
5.3	The quotient rule	72
6	Discrete random variables 1	73
6.1	General discrete random variables	73
6.2	Determining discrete probability distributions	75
6.2.1	Using a set of data	75
6.2.2	Uniform discrete random variables	75
6.2.3	Non-uniform discrete random variables	76
6.3	Expected value, variance, and standard deviation	77
6.3.1	Expected value	77
6.3.2	Variance and standard deviation	78
III	Exam Revision Tips	80
1	Advice for assessments	81
